

## **3 wheel vehicle 48v inverter**

## Overview

---

What is a 48V inverter?

The 48V inverter, the electronic component that drives the 48V eMotor (electric motor), is able to be integrated on all architectures beyond P0 (alternator position) meaning between the engine and the gearbox or in the gearbox or on the vehicle rear axle.

What is a 48V electric drive?

Providing right-sized power (18kW continuous and up to 25kW peak) in a small package at an affordable cost, the 48V Electric Drive is a breakthrough in hybridization, which can also address light electric vehicles (LSEV or small BEV).

What is a two-wheeler traction inverter system?

The primary goal of a two-wheeler traction inverter system is to drive the traction motor which is typically a permanent magnet synchronous motor (PMSM) type or a brushless DC type of motor. Several important design considerations determine the overall functionality and performance of the traction system.

What is Valeo 48V eDrive?

The Valeo 48V eDrive (electric drive) or powertrain is a system embedding a high-efficiency electric motor with its associated inverter and a reducer. It improves the fuel consumption (up to 15% CO2 benefits on WLTP), the driver comfort by providing full electric mode, efficient regenerative braking and four-wheel drive capability in 48V.
