## 40-foot folding container for wastewater treatment plants

## Overview

---

What is a containerized wastewater treatment plant?

A containerized wastewater treatment plant is a wastewater treatment system that is fully integrated into a container. For uncomplicated and fast transportation, we use 10, 20 and 40-foot shipping containers in accordance with the international ISO standard for our KLARO container systems.

How long does a containerized wastewater treatment plant take?

We offer a variety of capacities that can meet your requirements. As the pre-assembled containerized wastewater treatment plant is located inside a standard 20 or 40 foot shipping container, it can be relocated and installed with ease at other locations. In most cases it is a one to two-day operation and requires only a flatbed truck and a crane.

What size container sewage treatment plant do you use?

For uncomplicated and fast transportation, we use 10, 20 and 40-foot shipping containers in accordance with the international ISO standard for our KLARO container systems. Container sewage treatment plants are mainly used for short-term use in remote areas that are not connected to a sewage system, in camps and on construction sites.

How can a containerized water treatment system help a large-scale reverse osmosis plant?

Take the difficulty out of large-scale reverse osmosis plants with containerized water treatment systems. By choosing pre-designed, module-sized plants, fully assembled in standard 20-ft and 40-ft containers with the option for a 10-ft as well, the complexity and construction of building water purification systems are no longer necessary.

## 40-foot folding container for wastewater treatment plants
