

# **60kWh of Australian photovoltaic containers used in power grid distribution stations**

## Overview

---

What happened to Australia's grid-connected photovoltaics market in 2023?

The Australian market for grid-connected photovoltaics (PV) remained stable in 2023, slowing in centralised (utility scale) and growing in decentralised (rooftop) installs, with 4.2 GW of new solar registered.

What is PV in Australia Report 2020?

may freely be used but all such use should cite the source as “PV in Australia Report 2020, APVI, September 2021”. This report is prepared by the Australian PV Institute (APVI) in its role representing Australia on the International Energy Agency (IEA) in the IEA PV Power Systems (PVPS) Technical Collaboration Platform.

How many solar PV installations are there in Australia?

As of 30 June 2025, there are over 4.16 million PV installations in Australia, with a combined capacity of over 41.8 gigawatts. The following graphs show the rated capacity of solar PV installed in each month. The rate of installations has been influenced by changes in the policy mechanisms that have supported this technology.

Are there any large-scale solar plants in Australia?

There are no agriculture-specific large-scale solar plants. Two GW-scale solar projects are under development: The Australian-ASEAN Power Link in the Northern Territory, which is projected to be the world's largest solar farm and battery storage facility with 10GW of solar and an under-sea cable delivering power into Southeast Asia.
