

A few kilowatts of high-end solar lights

Overview

How many solar lights are there?

Over the past two years, we've tested 78 different outdoor lights (you read that right), including solar pathway, smart, spotlights, lanterns, wall-mounted, and string lights. We became solar light experts, if we do say so ourselves.

What are the best solar-powered string lights?

Stringing: Solar-powered string lights like our best string lights pick, the Brightech Solar LED String Lights, can provide ambiance to your outdoor space all year.

How do I choose the Best Lighting for my yard?

Before choosing just any one for your yard, start by asking yourself how much brightness you need and if the light needs to be direct or spread out. Solar pathway lights guide you when walking at night, while mounted spotlights may have security monitors or be intended to highlight landscape features.

What are some design flaws with solar lights?

One other design flaw to note is that the solar sensor panel is in the middle of the light—once you push the stake into the ground, it sits very low to the ground, which means we couldn't put the lights exactly where we wanted in our bushes because the sensor gets easily buried amongst the greenery, where it can't catch daylight.
