

# Arc flash switchgear in China in Suriname

## Overview

---

Are arc flash and arc-flash studies a safety concern?

Arc-flash and arc-flash studies are also clarified. This White Paper also highlights a safety concern when HV/MV switchgear fails catastrophically, particularly oil-filled switchgear assembly. Within IEC Standards, HV switchgear are used on systems above 1 kV up to 52 kV. In North America MV is any voltage between 600 V and 69 kV.

Are pgr-8800 and afr-4 arc flash protection relays suitable?

To meet the requirement for comprehensive monitoring of 24 arc flash sensors across multiple switchgear panels, we have identified the PGR-8800 and AFR-4 arc flash protection relays as suitable solutions.

Does switchgear have an internal arc type test?

When IEC 62271-200 was implemented in 2003, if switchgear was internal arc tested, the main MV compartments were tested, i.e. the switching, busbar and connection compartments. It is also a common misnomer that the internal arc type test is mandatory. The internal arc type test is an optional test within IEC 62271-200.

Why is arc flash protection important?

Due to the sheer size of the switchgear and the multiple busbar compartments and circuit breakers inside, an arc flash event in any location could be catastrophic to both personnel and equipment. Therefore, installing a robust arc flash protection system was a critical priority for the factory.
