## Overview

---

What is a lead acid battery container?

The container is a fundamental part of the lead acid battery's construction. There are, in general, two methods of producing the active materials of the cell and attaching them to lead plates. These are known after the names of their inventors. Plante plates or formed lead acid battery plates. Faure plates or pasted lead acid battery plates.

What is a lead acid battery?

**Lead Acid Battery Definition:** A lead acid battery is defined as a rechargeable battery that uses lead and sulfuric acid to store and release electrical energy.  
**Container Construction:** The container is made from acid-resistant materials and includes features to support and separate the plates.

How many parts are in a lead acid battery?

There are mainly two parts in a lead acid battery. The container and plates.  
**Lead Acid Battery Container** As this battery container mainly contains sulfuric acid hence the materials used for making a lead acid battery container must be resistant to sulfuric acid.

How are lead acid battery plates made?

Two lead plates after being subjected to hundreds of reversals will acquire a skin of lead peroxide thick enough to process sufficiently high capacity. This process of making positive plates is known as formation. The negative lead acid battery plates are made by same process.
