

# Battery New Inverter

## Overview

---

What is a battery inverter?

A battery inverter, also known as a DC to AC inverter, converts the direct current (DC) stored in a battery into alternating current (AC), which is the type of current typically used in homes, businesses and industry. Battery inverters are therefore essential for making use of stored solar power.

Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

What is a power inverter?

A power inverter is an electronic device that converts direct current (DC) from sources like batteries or solar panels into alternating current (AC) that powers our home appliances. Most of your home devices—from televisions to refrigerators—run on AC.

What type of batteries are used in inverter systems?

The most commonly used batteries in inverter systems are tubular lead-acid batteries and flat plate lead-acid batteries, with lithium-ion batteries becoming more popular in recent years. Tubular batteries are preferred for their deep discharge capacity and long life, making them ideal for homes with frequent power cuts.
