What is a battery test chamber?

Our battery test chambers are designed to test Lithium Ion batteries, lead acid, Battery Managements Systems (BMS), battery packs, modules, battery cells, and more. Our battery test chambers also offer many safety features that conform to IEC, UL and EUCAR testing standards for battery safety.

How are electric vehicle batteries tested?

To ensure that the battery is as safe as a conventional fuel tank, it is necessary to test electric vehicle batteries by modelling the actual conditions of a crash that may cause major deformation of the battery. The tests are conducted at our crash test facility, which utilizes impactors with variable mass and geometry.

What types of testing can be done for a battery?

The expertise includes Performance & Endurance Testing, Environmental Testing and Mechanical & Abuse Testing. All types of batteries can be tested - from cell to module to pack and even stationary racks. Standards such as UL, IEC, UN, ISO and automotive (e.g. LV124) will also be taken into account during testing.

What is a battery test bench?

These test bench solutions will allow OEMs, service providers and battery manufacturers worldwide to certify their batteries for passenger EVs and electric trucks. The expertise includes Performance & Endurance Testing, Environmental Testing and Mechanical & Abuse Testing.
