

# **Beirut changes solar site energy**

## Overview

---

### What's behind Lebanon's solar boom?

The solar boom is a byproduct of Lebanon's crisis. Private installations in businesses and homes since 2020 will have added 350MW of renewable power — about 5-7 per cent of Lebanon's annual energy needs — by year-end, said Pierre El Khoury, head of the state-affiliated Lebanese Center for Energy Conservation.

### Does Beirut have a potential for distributed solar PV?

The results show that Beirut city has a potential for distributed rooftop solar PV to be between 195 and 295 MWp. However, adoption rates are low at 0.49% and 1.23% for residential and commercial buildings, respectively, reflecting the limitation of financial incentives alone to promote the deployment of distributed renewable energy systems.

### Can rooftop solar energy be used in Beirut?

The potential for distributed rooftop solar energy in Beirut is estimated at the building level. The effects of economic and non-economic factors on solar PV adoption are analyzed using a probabilistic choice model. The impacts of various incentive policies and societal factors on promoting PV are investigated with policy implications.

### Why do Lebanese people use solar power?

Hashem is one of tens of thousands of Lebanese people who have turned to solar power in the absence of reliable electricity supplies from EdL. Panels have sprouted everywhere, from urban rooftops to rural monasteries and on electric scooters, to take advantage of Lebanon's 300 days of sunshine a year.
