

Box-type uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

How do I Choose an uninterruptible power supply for DC applications?

Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions. Select the appropriate DC UPS for your application. Our uninterruptible power supplies for AC applications provide a pure sine curve at the output. Select the ideal AC UPS and ensure superior system availability.

What is an uninterruptible combined UPS system?

The uninterruptible combined UPS units include an economical 24 V DC switched mode power supply with an integrated charge and control unit for optimal battery management. These space-saving combined UPS systems control and monitor the connected battery modules, providing early warnings when battery life expectancy is low.

What is the difference between a UPS & energy storage?

UPS Definition: A UPS (Uninterruptible Power Supply) is defined as a device that provides immediate power during a main power failure. **Energy Storage:** UPS systems use batteries, flywheels, or supercapacitors to store energy for use during power interruptions.
