## Overview

---

Are flow batteries a viable energy storage device?

Flow batteries (FBs) are one of the most promising stationary energy-storage devices for storing renewable energy but their commercial progress is limited by their high cost and low energy density. A neutral zinc-iron FB with very low cost and high energy density is presented.

Can flow batteries make solar energy storage more affordable?

Flow batteries, in particular, offer an opportunity to make renewable storage more affordable, and could help to grow the industry - increasing the prospects for utility-scale development of solar energy storage.

Are flow batteries the future of energy storage in Australia?

Australia is one of the fastest growing energy storage markets in the world with the most mature storage technologies being pumped hydro and lithium-ion batteries [i]. But other technologies have been developing in the background - such as flow batteries - which provide opportunities in larger scale applications.

How much energy will a flow battery store?

The battery will store 800 megawatt-hours of energy, enough to power thousands of homes. The market for flow batteries - led by vanadium cells and zinc-bromine, another variety - could grow to nearly \$1 billion annually over the next five years, according to the market research firm MarketsandMarkets.
