What is the future of a frequency inverter?

Nowadays fuel cells powered by solar and wind energy are emerging as a latecomer to the market with their low prices. The most important feature of this power generation equipment is the capacity small and decentralized, the future of the frequency inverter to adapt to such new energy sources, both high efficiency and low consumption.

What is a frequency inverter?

A frequency inverter also called frequency converter, is a power control conversion device to convert normal power supply (50Hz or 60Hz) to another frequency power by inner power semiconductor on/off behaviors, to control electric motors in variable speed operations.

What is a variable frequency drive inverter?

Frequency inverters 50hz to 60hz can work at (-10°C, 40°C), and the Interior PID controller is convenient to make a closed-loop system. The variable frequency drive inverter is widely applied in industrial manufacturing, transportation, energy, construction, etc.
