

# Chemical Energy Storage Power Station

## Overview

---

Which energy storage power station successfully transmitted power?

China's largest single station-type electrochemical energy storage power station Ningde Xiapu energy storage power station (Phase I) successfully transmitted power. On November 16, Fujian GW-level Ningde Xiapu Energy Storage Power Station (Phase I) of State Grid Times successfully transmitted power.

How much electricity will a chemical energy storage project produce?

As the first national, large-scale chemical energy storage demonstration project approved, it will eventually produce 200 megawatts (MW)/800 megawatt-hours (MWh) of electricity. The first phase of the on-grid power station project is 100 MW/400 MWh.

What is chemical energy storage?

Among these, chemical energy storage (CES) is a more versatile energy storage method, and it covers electrochemical secondary batteries; flow batteries; and chemical, electrochemical, or thermochemical processes based on various fuels such as hydrogen, synthetic natural gas (SNG), methane, hydrocarbons, and other chemicals products.

What is Ningxia power's energy storage station?

On March 31, the second phase of the 100 MW/200 MWh energy storage station, a supporting project of the Ningxia Power's East Ningxia Composite Photovoltaic Base Project under CHN Energy, was successfully connected to the grid. This marks the completion and operation of the largest grid-forming energy storage station in China.
