

# **Conditions for the establishment of wind and solar complementary solar container communication stations in South Sudan**

## Overview

---

Can a multi-energy complementary power generation system integrate wind and solar energy?

Simulation results validated using real-world data from the southwest region of China. Future research will focus on stochastic modeling and incorporating energy storage systems. This paper proposes constructing a multi-energy complementary power generation system integrating hydropower, wind, and solar energy.

Is system capacity configuration a key technology for off-grid wind solar hydrogen production?

System capacity configuration, as a key technology for off-grid wind solar hydrogen production system, has been studied by domestic and foreign scholars from multiple perspectives. Recent research on capacity configuration mostly focuses on optimization objectives, algorithms, and models .

How can wind-solar complementary coupling hydrogen production be validated?

Validated method using Zhangjiakou Chongli wind-solar complementary coupling hydrogen production project data. The configuration and operational validation of wind solar hydrogen storage integrated systems are critical for achieving efficient energy utilization, ensuring economic viability, and maintaining system stability.

Does integrated hydro-wind-solar power generation reduce the waste of wind and solar energy?

The results indicate that in the integrated hydro-wind-solar power generation system, hydroelectric power reduces its output when wind and solar power generation is high, thereby minimizing the waste of wind and solar energy.
