Overview

What are the different types of crude oil storage tanks?

Open-Top Tanks: Less common for crude oil storage, these tanks are primarily used for temporary containment. **Internal Floating-Roof Tanks:** A hybrid of fixed- and floating-roof tanks, these tanks provide additional vapor containment for volatile crude oil fractions.

How many m³ crude oil storage tanks are there?

At present, 100,000 m³ crude oil storage tanks are the main container to storage crude oil all over the world. Storage tanks should not be built on the foundation with different hardness, or within the impact range of active geological fault zone.

How are crude oil tanks classified?

Crude oil tanks are classified based on their usage, construction, and regulatory compliance. The types of storage tanks in refinery settings generally fall into the following categories: **Atmospheric Storage Tanks:** Designed for storage at or near atmospheric pressure (non-pressurized), these are typically fixed- or floating-roof tanks.

What type of storage tank is used for crude oil?

Pressurized Storage Tanks: Used for storing volatile crude oil fractions (a group of hydrocarbons separated from the oil during fractional distillation) that require containment under pressure higher than atmospheric pressure. **Open-Top Tanks:** Less common for crude oil storage, these tanks are primarily used for temporary containment.
