Do solar panels need battery storage?

Absolutely! In fact, most home solar systems are currently operating without battery storage. If you're fine with drawing from the grid and not particularly worried about power outages, you might not need a battery. However, there are benefits to having battery storage for your solar panels — and they are becoming increasingly common.

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home, and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Why should you use a battery for your solar energy system?

You can enhance the performance of your solar energy system with batteries. Properly sized batteries improve system reliability by compensating for fluctuations in solar generation and energy demand. This adaptability ensures consistent power delivery. You contribute to a greener planet by utilizing battery storage.

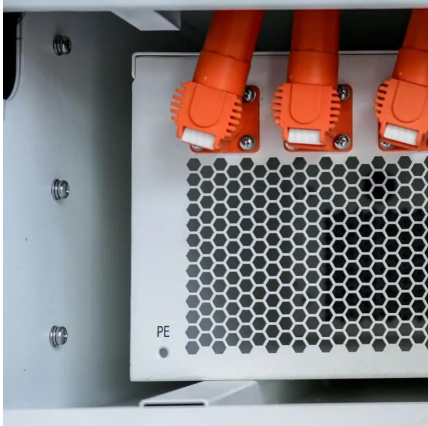

Do you need a solar battery bank?

You essentially use the local utility grid as a battery to “store energy” without needing a solar battery bank in your home. If you have your own battery storage, you likely won't transfer much energy to or from the grid. You store your own energy and pull from that, and the grid serves as a backup to the backup.
