## Overview

---

What is an emergency power supply system?

An emergency power supply system refers to a backup power source that operates in standby mode and provides power only during mains failure, ensuring reliability in various applications such as engine starting for standby power systems and emergency lighting in trains and marine environments. How useful is this definition?

What is an emergency power supply system (EPSS)?

The emergency power supply system (EPSS) is an independent power system, consisting of its own on-site power generation and distribution systems (whose normal power supply comes from Class III). This system belongs to Group II.

What is an immediate response emergency backup power system?

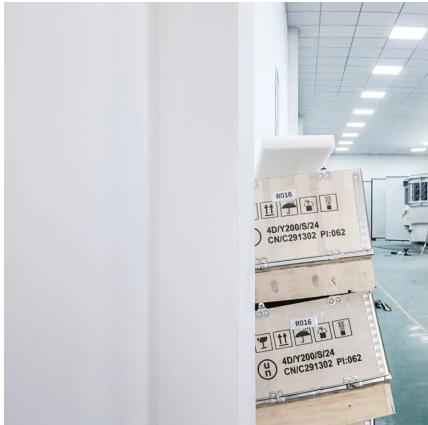

Immediate response emergency backup power systems are designed to activate rapidly, typically within a few milliseconds, to provide uninterrupted power supply during an outage. These systems are crucial for life safety and maintaining critical operations that cannot tolerate any downtime.

What is energy storage?

It's a new approach that enables energy storage—once a costly, passive (but necessary) disaster recovery asset—to emerge as a cost-effective, active participant that stands to make power systems and consumer services more resilient, more efficient, and more responsive to the need for a sustainable, readily-adaptable energy environment.
