

# **Energy storage device in Sydney office building Australia**

## Overview

---

How is electricity stored in Australia?

This means a more reliable and constant supply of energy on and off-grid. Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup.

Where are battery energy storage systems being installed in Australia?

We've awarded Hybrid Systems Australia the contract to supply and install Battery Energy Storage Systems (BESS) in Carnarvon, Marble Bar, Wiluna, Yalgoo and Yungngora. The systems will be deployed across 2021 and will allow customers to install rooftop solar systems on their homes once commissioned.

Should companies invest in energy storage?

Energy and climate-related policies have been accelerated by both state and federal governments, and for many companies the time feels right to invest in energy storage.

How does energy storage work?

Energy storage secures and stabilises energy supply, and services and cross-links the electricity, gas, industrial and transport sectors. It works on and off the grid, in passenger and freight transportation, and in homes as 'behind the meter' batteries and thermal stores or heat pump systems.
