

# Fixed base station equipment for emergency communications

## Overview

---

What is a VHF base station?

A VHF (Very High Frequency) base station is a fixed communication device that operates within the 30 MHz to 300 MHz frequency range. Known for their superior range and clarity in open environments, VHF base stations are ideal for applications that require communication across vast, unobstructed areas such as rural landscapes, and outdoor events. 1.

What is a base station Radio?

A base (or fixed) station radio also contains a transmitter and a receiver. The radio is powered by an external electrical system (typically 110 V ac) and is connected to an antenna located tens to hundreds of feet away, typically on top of a building or on a tower.

Can a mobile radio be combined with a base station Radio?

As with portable radios, mobile radios may be combined into a radio communication system with other portable, mobile, and base station radios. A base (or fixed) station radio also contains a transmitter and a receiver.

What RF band does a public safety radio use?

Common radio messages are transmitted over the RF band between 0.05 MHz and 900 MHz. Most public safety communications radios (portable, mobile, base station, and repeaters) transmit frequencies between 30 MHz and 900 MHz which are dedicated to public service use.
