

Guinea Communications upgrades 5g base stations

Overview

Will China build a 5G base station next year?

Technicians from China Mobile check a 5G base station in Tongling, Anhui province. [Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

Can a base station be used for 5G?

As a result, manufacturers are able to repurpose these base stations for 5G applications. For example, manufacturers are converting 4G radios into 5G devices that also support the 4G network. A 5G smartphone will require a 5G chipset to support the 5G network.

How does 5G work?

5G, like other wireless technologies, relies on base stations to handle cellular traffic. However, base stations with single-input single-output systems had very low throughput. On a cellular network, they were not able to support multiple connected devices with high reliability.

Will 5G Revolution & 6G innovation be a priority next year?

The move comes as the country charted its vision for industrial growth during a two-day work conference of the Ministry of Industry and Information Technology. With 4.19 million 5G base stations already in operation, the industry regulator said that "promoting 5G revolution and 6G innovation will be one of the priorities" next year.
