

High frequency uninterruptible power supply battery

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPSs) deliver clean, conditioned, and reliable power to critical loads such as communication systems, network servers, medical equipment, etc. Typically, the UPS provides unity power factor, high efficiency, high reliability, low cost, and continuous power supply, irrespective of the grid conditions [2, 3, 4].

What is a high-frequency isolated online UPS system for low power applications?

This paper proposes a high-frequency isolated online UPS system for low power applications. The proposed UPS consists of a single-stage AC-DC converter, boost DC-DC converter, and an inverter. The single-stage AC-DC converter provides galvanic isolation, input power factor correction, and continuous conduction of both input and output current.

What is a single phase high-frequency transformer isolated online UPS?

Conclusions A single phase high-frequency transformer isolated online UPS has been proposed in this paper. A single-stage AC-DC converter provides galvanic isolation, efficient power conversion, and excellent power factor correction. Besides, the AC-DC converter also charges the battery bank of the UPS system during grid mode of operation.

What is a high-frequency transformer based UPS?

High-frequency transformer-based UPSs offer an effective solution to the problems mentioned above by reducing the size of the system as well as providing suitable galvanic isolation between the load and grid.
