

# Horizontal installation and price of solar modules

## Overview

---

How much does a solar panel installation cost?

For example: A 4kW horizontal system on a pitched roof may cost around £6,000-£7,500, fully installed. Installation time is typically 1-2 days, depending on roof access and weather conditions. In contrast, vertical solar panel installations often incur higher upfront costs.

Can hybrid solar panels be installed horizontal or vertical?

Yes, hybrid systems can be installed where some panels are mounted horizontally and others vertically to maximise space and output. Choosing between horizontal and vertical solar panel installations ultimately depends on your property type, energy goals, and aesthetic preferences.

What is the difference between horizontal and vertical solar panel installation?

The primary difference between horizontal and vertical solar panel installation lies in the orientation of the panels. Horizontal installations position the panels in a landscape layout, while vertical installations place them in a portrait layout.

Are horizontal solar panels good for commercial buildings?

Commercial buildings often have big, flat roofs. This makes them great for horizontal solar panels. You can put many panels up and make lots of energy for your business. Horizontal panels are easy to take care of and use space well. They also cost less to put in than vertical systems.
