How many power stations are there in Asuncion

Overview

Is Asunción a major city?

Asunción has all the physical assets of a major city and, as is to be expected, varying levels of development. It has a historical district, residential neighbourhoods, commercial areas, and the typical infrastructure of a major city.

Is Asunción an urban area?

Surrounded by the Paraguay River and other municipalities, urban development in Asunción has already reached the city's territorial limits. The metropolitan area consists of Asunción and 10 other municipalities within the Central Department. They all form part of a continuous urban area with an exclusively urban population, occupying 686 km 2.

Is Asunción a green city?

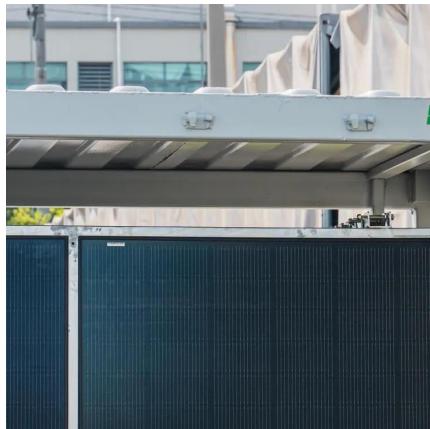

Asunción was designated a green city following a process involving an extensive study and it is estimated that Asunción contains more than 750 hectares of green space, comprised of approximately 200 sites (plazas, squares, parks, viewpoints, cycle paths, linear commons, etc.).

What is the weather like in Asunción?

According to historical records, the average annual temperature in Asunción is 22.7 °C (21-year historical database) with an average rainfall of 1370 mm per year (114-year historical database). The weather variation over the course of the year is as follows: January is the warmest month with an average temperature of 27.4 °C.
