

How many watts of solar energy should I choose

Overview

What wattage should a solar panel be?

For most residential solar panels, this typically ranges between 250W and 400W. Here's where it gets tricky: wattage isn't everything. Sure, a higher wattage sounds like a win, but if your home is bathed in sunlight year-round, even a 250W panel can perform like a champ.

How do you calculate solar panel wattage?

Divide the average daily wattage usage by the average sunlight hours to measure solar panel wattage. Panel output efficiency, energy usage, sunshine exposure, system capacity, panel types, and materials all impact the calculation.

How much power does a solar panel use?

Solar panel power ratings range from 250W to 450W. Based on solar.com sales data, 400W is the most popular power rating and provides a great balance of output and Price Per Watt (PPW). If you have limited roof space, you may consider a higher power rating to use fewer panels. If you want to spend less per panel, you may consider a lower wattage.

How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings — not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.
