# How much does a double-glass bifacial solar module cost

## Overview

---

The average cost range to install bifacial solar panels in the US is \$6,000 to \$12,000. According to Fixr, most people pay around \$8,000 for 10 bifacial solar panels in a porch cover configuration. How much do bifacial solar panels cost?

The average cost range to install bifacial solar panels in the US is \$6,000 to \$12,000. According to Fixr, most people pay around \$8,000 for 10 bifacial solar panels in a porch cover configuration. If you're looking to mount 10 bifacial panels around the edge of your home, that will cost you around \$5,000.

How much does a BIPV solar module cost?

The average price for an European BIPV glass glass module rounds about 120-250€/m<sup>2</sup>, whereas the minimum price for standard European glass-glass module can be as low as 95€/m<sup>2</sup>. But if you are looking for a one-of-a-kind result for solar exterior customization, the price can go up to as much as 380€/m<sup>2</sup>.

What is the cost gap between bifacial and conventional solar panels?

The cost gap between bifacial and conventional modules is decreasing as supply and demand increase. The International Technology Roadmap for Photovoltaic (ITRPV) estimated in 2020, that the world market share of bifacial cell technology would be around 70% in 2030. What is a bifacial solar panel?

What is a bifacial solar module?

The front of a bifacial solar module is covered with a protective glass and the rear side may be made of either glass or transparent polymer backsheet that allows sunlight to pass through. This stands in contrast to conventional solar panels which have opaque backsheets.
