

# How much does it cost to store electricity per kWh

## Overview

---

How much does energy storage cost?

Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks. As prices drop and technology gets better, people need to know what causes these changes.

Why do we need energy storage costs?

A comprehensive understanding of energy storage costs is essential for effectively navigating the rapidly evolving energy landscape. This landscape is shaped by technologies such as lithium-ion batteries and large-scale energy storage solutions, along with projections for battery pricing and pack prices.

How have energy storage costs changed over the past decade?

Trends in energy storage costs have evolved significantly over the past decade. These changes are influenced by advancements in battery technology and shifts within the energy market driven by changing energy priorities.

How much does energy storage cost in 2025?

In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks.
