

# How to Choose an Off-Grid Solar Container Hybrid

## Overview

---

How do I design an off-grid solar or battery system?

The most important part of designing any off-grid solar or battery system is calculating the daily energy requirement in kWh. For grid-connected sites, detailed load data can often be obtained directly from your electricity retailer or by using meters to measure the loads directly.

What are the different types of hybrid and off-grid inverters?

Below are two main types of hybrid and off-grid inverters available. Off-grid inverters utilise heavy-duty transformers, which are more expensive but offer high surge and peak power output, and can handle high inductive loads. These inverters typically contain active fan-forced cooling systems to help maintain performance in high temperatures.

Who should install a solar and battery storage system?

Solar and battery storage systems should always be installed by a licensed electrical professional. Before purchasing any equipment required for a solar battery (hybrid) or off-grid power system, it is very important to understand the basics of designing and sizing energy storage systems.

Is a lithium battery enough for an off-grid home?

Hybrid Vs. Off-grid Example - For a typical grid-connected home with peak (evening) energy use of 10kWh from 5 pm until midnight, a 12-15 kWh lithium battery would be sufficient. However, for off-grid systems, the battery system will need to store enough energy for several consecutive days of bad weather.
