

Installation of solar panels on wasteland

Overview

Can solar PV be sited on municipal solid waste landfills?

This document provides best practices unique to siting solar PV on landfills for solar developers and landfill owners as well as federal, state and local stakeholders. Identifying several benefits for siting solar photovoltaics facilities on municipal solid waste landfills. Contact Us to ask a question, provide feedback, or report a problem.

Should solar PV be sat on landfills?

This document provides best practices unique to siting solar PV on landfills for solar developers and landfill owners as well as federal, state and local stakeholders. Identifying several benefits for siting solar photovoltaics facilities on municipal solid waste landfills.

Should solar projects be based on closed landfills?

Case studies of solar projects on closed landfills are presented too. A landfill is required to be closed in accordance with regulatory requirements after it has reached its capacity. The final cover system isolates the underlying waste to protect the environment and therefore, is the most critical component of a landfill closure system.

How does a landfill solar project work?

Designing and permitting a landfill solar project typically involves geotechnical investigation, stormwater management study, solar panel and electrical system design, and demonstration that development and operation of the solar system is not expected to negatively impact performance of the final cover system.
