

# Is battery BMS useful

## Overview

---

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

Why do lithium batteries need a BMS?

The BMS prevents your lithium battery’s voltage from going too high (causing overheating and gas release) or too low (leading to permanent damage). Damage occurs if you overcharge (cell voltage gets too high) or over-discharge (cell voltage gets too low) a lithium-ion battery cell. Overcharging occurs when recharging exceeds a battery’s safe range.

What makes a good battery management system?

They need to handle new challenges while controlling complex battery systems more precisely. A good battery management system (BMS) needs hardware components that work together to monitor, protect, and optimize battery performance. These components act as the system’s eyes and ears.

Why do we need a BMS?

The necessity of BMS in these systems can be attributed to a number of factors: The protection of the battery system is one of the main goals of using a BMS. Lithium-ion batteries in particular risk becoming volatile if improper care is not taken with them.
