Kosovo BMS battery management system function introduction

Overview

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

What is a BMS used for?

A Battery Management System (BMS) is widely used in various applications such as electric vehicles (EVs), energy storage systems (ESS), uninterruptible power supplies (UPS), and industrial battery applications.

What is a battery management system?

The battery management system is an electronic system that controls and protects a rechargeable battery to guarantee its best performance, longevity, and safety. The BMS tracks the battery’s condition, generates secondary data, and generates critical information reports.

What data does a battery management system collect?

The BMS collects data such as voltage, temperature, current, and state of charge. This data is vital for system diagnostics and performance optimization. The BMS may communicate with other devices, such as vehicle controllers or cloud-based systems, to relay real-time information about the battery’s condition and performance.
