## Overview

What is a lithium iron phosphate (LiFePO4) battery?

In the realm of energy storage, lithium iron phosphate (LiFePO4) batteries have emerged as a popular choice due to their high energy density, long cycle life, and enhanced safety features. One pivotal aspect that significantly impacts the performance and longevity of LiFePO4 batteries is their operating temperature range.

What temperature does a lithium iron phosphate battery reach?

Although it does not reach the critical thermal runaway temperature of a lithium iron phosphate battery (approximately 80 °C), it is close to the battery's safety boundary of 60 °C. Compared with the 60C discharge condition, the temperature rise trend of 40C and 20C is more moderate.

What is a lithium iron phosphate battery?

Battery test platform Lithium iron phosphate batteries are considered to be the ideal choice for electromagnetic launch energy storage systems due to their high technological maturity, stable material structure, and excellent large multiplier discharge performance.

What temperature should LiFePO4 batteries be stored?

The recommended storage temperature for LiFePO4 batteries falls within the range of -10°C to 50°C (14°F to 122°F). Storing batteries within this temperature range helps maintain their capacity and overall health, preventing degradation and preserving their ability to deliver power effectively when put back into use.
