## Overview

---

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

What time does the energy storage power station operate?

During the three time periods of 03:00–08:00, 15:00–17:00, and 21:00–24:00, the loads are supplied by the renewable energy, and the excess renewable energy is stored in the FESPS or/and transferred to the other buses. Table 1. Energy storage power station.

Which power station has advantages over other power stations?

For example, Station A has advantages over other power stations in terms of comprehensive efficiency and utilization coefficient, while it is relatively insufficient in terms of offline relative capacity, discharge relative capacity, power station energy storage loss rate, and average energy conversion efficiency. Fig. 6.

Which energy storage power station has the highest evaluation Value?

Calculation results of relative closeness. According to the evaluation values of the operational effectiveness of various energy storage power stations, station F has the highest evaluation value and station C has the lowest evaluation value.
