## Overview

---

Can broadband field probes assess 5G base stations compliance?

This paper analyzes the feasibility of assessing the 5G base stations compliance using broadband field probes and compares their performance with alternative methodologies and equipment.

How do urban radio stations manage power & environmental management?

For urban radio sites, some operators use a multi-layer control system for their power & environmental management. Each city has a power & environmental monitoring system which reports to a higher-level monitoring center.

Are mobile base station sites EME compliant?

The Radio Communications Licence Conditions (Apparatus Licence) Determination 2015 mandates that the operation of equipment does not exceed the general public exposure limit. All mobile base station sites are required to be approved for EME compliance. This process ensures the safety of the General Public.

How can EMS improve power & environmental monitoring?

Traditionally, power supply modules and network equipment are managed separately. Through EMS, operators can turn off a carrier but not a power module. Integration of the EMS and the power & environmental monitoring system can help solve this problem and enhance maintenance efficiency.
