

# **North Korea off-grid solar power generation system**

## Overview

---

Can solar power solve North Korea's energy problems?

Jeong-hyeon, a North Korean escapee, told the Financial Times that many residents in Hamhung, the second-most populous city, “relied on a solar panel, a battery and a power generator to light their houses and power their television”. But solar power is still only a partial solution to the country’s energy woes.

Does North Korea's power plant transfer its energy to the grid?

While small in size, the power project appears to transfer its energy into North Korea’s electricity grid, according to video of the plant on state television. Figure 12.

How many solar panels are there in North Korea?

The Korea Energy Economics Institute in Seoul estimates that 2.88mn solar panels, mostly small units used to power electronic devices and LED lamps, are now in use across North Korea, accounting for an estimated 7 per cent of household power demand.

How will solar power help North Korea's rural communities?

Solar panels and wind turbines are off-grid energy sources, meaning that their generated energy will be able to power nearby rural communities rather than large military and industrial sites. This will be especially helpful to improve the living standards of North Korea’s rural residents.

## North Korea off-grid solar power generation system
