

Operation and maintenance of power phase change energy storage

Overview

What is phase change energy storage?

Phase change energy storage combined cooling, heating and power system constructed. Optimized in two respects: system structure and operation strategy. The system design is optimized based on GA + BP neural network algorithm. Full-load operation strategy has good economic, energy and environmental benefits.

Are phase change energy storage CCHP systems optimized under full-load operation strategy?

The optimization indexes of the phase change energy storage systems in each climate zone under the full-load operation strategy are shown in Fig. 9. As can be seen from the figure, the energy savings of the phase change energy storage CCHP systems in all five cities are obtained under the full-load operation strategy.

Can phase change energy storage improve energy performance of residential buildings?

This study presents a phase change energy storage CCHP system developed to improve the economic, environmental and energy performance of residential buildings in five climate zones in China. A full-load operation strategy is implemented considering that the existing operation strategy is susceptible to the mismatch of thermoelectric loads.

What is the economic optimization metric for phase change energy storage?

This study selects the ATCSR as the main economic optimization metric for the CCHP system with phase change energy storage. The ATCSR is characterized as the ratio of the annual total cost difference between the SP system and the phase change energy storage CCHP system to the annual total cost of the SP system, as stated in .
