

# **Panama Energy Storage Project Cooperation**

## Overview

---

What is energy infrastructure development in Panama?

1. INTRODUCTION Energy infrastructure development in Panama, as in the rest of Latin America, was conceived under assumptions of climate stability, anticipating minimal or even no changes in climate behaviour over the long term.

How much solar energy will be compromised in Panama in 2022?

The energy volumes compromised under this scenario would be equivalent to 8% of the gross generation recorded for solar PV power plants in Panama in 2022 (160.15 GWh). As for the SSP5-8.5 scenario, it is projected that by 2050, the compromised solar PV generation capacity will be 8.7 MW, and by 2070, it is expected to increase to 11.1 MW.

How many solar power plants are in Panama by 2022?

Meanwhile, the compromised energy volumes are estimated at 15.17 GWh/year and 19.41 GWh/year, respectively. These low compromised power volumes represent between 9% and 12% of the gross generation registered for solar PV power plants in Panama by 2022 (160.15 GWh).

Will Panama's energy infrastructure be flooded by 2050?

The road infrastructure that provides access to Panama's energy infrastructure faces a considerable risk of extreme flooding by 2050. Specifically, it is estimated that 60% of the roadway, corresponding to 3 149 km, will be at high risk of being affected, mainly in the south-western part of the country, as shown in Figure 43.
