

Peru Construction Investment Wind Power Energy Storage

Overview

Will the government of Peru implement wind farms in different places?

There are high expectations that the government of Peru will promote public policies that seek the implementation of wind farms in different places in the territory, which will allow the generation of renewable energy and provide access to clean energy to more inhabitants and productive activities.

What is the largest wind project in Peru?

The Wayra extension, added to Wayra I, will form the largest wind project in Peru, with an installed power of almost 310 MW. The characteristics of each wind turbine to be installed in the Wayra extension are the following: power per wind turbine: 5.9 MW; height: 180 m; and blade length: 76 m. These are all shown in Table 10. Table 10.

Does Peru have a good model of wind energy development?

It is necessary for Peru to consider as a reference the successful models of wind energy development implemented in neighboring Latin American countries, with the cases of Mexico, Brazil, Uruguay, Argentina, and Chile being references in this matter, countries in which there are an important number of wind farms in operation [46, 47, 48, 49, 50].

Why is wind energy so important in Peru?

It was the first to be installed and operated in the Andes mountain range of Peru, a geographically strategic place due to its exceptional meteorological conditions for the generation of this type of energy, with around 5000 net hours of wind per year.
