

# Processing of poles in new energy battery cabinets

## Overview

---

What is the current state of lithium battery pole mill control?

PLoS One. 2022; 17 (5): e0264285. At present, the global demand for lithium batteries is still in a high growth state, and the traditional lithium battery pole mill control system is still dominated by ARM (Artificial Intelligence Enhanced Computing), DSP (Digital Signal Processing), and other single-chip control methods.

What is the working environment of lithium battery pole mill?

The working environment of lithium battery pole mill is complex and the signal acquisition is difficult, and the integration and flexibility of the measurement and control system composed of single control unit such as PLC and ARM are poor, especially for the multi-motor control of complex electromechanical equipment.

How to design an energy storage cabinet?

The following are several key design points: Modular design: The design of the energy storage cabinet should adopt a modular structure to facilitate expansion, maintenance and replacement. Battery modules, inverters, protection devices, etc. can be designed and replaced independently.

What type of batteries are used in energy storage cabinets?

Lithium batteries have become the most commonly used battery type in modern energy storage cabinets due to their high energy density, long life, low self-discharge rate and fast charge and discharge speed.
