# Prospects of energy storage power stations in Greece

## Overview

---

What percentage of Greek electricity consumption is residential?

Historically, residential and commercial-public sector comprise ~70% of total electricity consumption of Greek market. Electricity retail prices were historically consistent in the Greek market until 2021, with minor deviations in end-user prices year over year. upfront prices.

What will happen to Greece's power supply in the next decade?

Breakthroughs are expected to occur in the current decade in the field of power supply in Greece, as the RES share in power generation is expected to increase significantly and gradually replace the use of fossil fuels.

Why did electricity consumption decrease in Greece?

Greece decrease of 3,3%. This decline was mainly attributed to the region's grappling with soaring energy costs, which resulted in substantial reduction in demand, especially among industrial users. Additionally, an unusually mild winter exerted further downward pressure on electricity consumption.

How is Greece promoting decarbonization?

Greece is enacting extensive reforms within its energy sector to promote decarbonization and encourage the development of competitive markets. compared to 2010 levels. This is mainly attributed to the large decrease of lignite generation and the uptake of renewable energy.
