Proxy ups uninterrupted power supply

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

How do I Choose an uninterruptible power supply for DC applications?

Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions. Select the appropriate DC UPS for your application. Our uninterruptible power supplies for AC applications provide a pure sine curve at the output. Select the ideal AC UPS and ensure superior system availability.

What are the components of a UPS system?

Components: Parts of a typical UPS system are an inverter, which transforms stored DC power back into AC power after a power loss, a battery, which stores electrical energy, and a rectifier, which converts incoming AC power to DC power for charging the internal battery.

What is the purpose of a UPS system?

The purpose of a UPS system is to offer instant backup power in the event that the main power supply fails or deviates from allowable bounds.
