## Overview

---

Who makes the safest lithium iron phosphate (LiFePO<sub>4</sub>) battery pack?

Keheng, as an LPF Battery Cell manufacturer, produces the safest Lithium Iron Phosphate (LiFePO<sub>4</sub>) battery packs, which is the optimal solution for energy storage, power, medical, industrial, and commercial applications with its high safety, long cycle life, and no memory effect.

What is a cylindrical lithium ion battery?

Cylindrical cells are one of the most widely used lithium ion battery shapes due to ease of use and good mechanical stability. The tubular cylindrical shape can withstand high internal pressures without collapsing. Melasta produces multiple sizes and capacities according to the customer requirement.

How many cycles can a lithium phosphate LiFePO<sub>4</sub> battery run?

A Lithium Phosphate LiFePO<sub>4</sub> Battery charged at 1C can typically achieve around 2000 cycles. It offers notable safety features, such as resistance to puncture-induced explosions and a reduced risk of burning when overcharged. The lithium iron phosphate cathode material enables the seamless use of large-capacity lithium batteries in series.

What is the float voltage of a lithium iron phosphate battery?

Because lithium iron phosphate positive material discharges at about 3.3V, and graphite forms the negative electrode, then after assembling into a battery, the nominal voltage of the battery is 3.2V, the float voltage is 3.65V, and the cut-off voltage is 2.5V.
