

Solar 2 0mm thick glass fully tempered

Overview

Is tempered solar glass better than heat-strengthened glass?

Special recognition by Hon. Prime Minister of India Shri. Narendra Modi. Fully tempered 2 MM solar glass is 2 times stronger than heat-strengthened glass. The glass is safer and stronger than heat-strengthened glass (that leads to larger and sharper pieces when broken), and qualifies as safety glass for BIPV, rooftops, and claddings.

What is the thickness of solar glass?

But the solar glass is different from common solar panels, the glass thickness can be 2.0mm and 2.5mm thickness for choice, For the double glass solar panels 2.0mm glass thickness, laminated with other components like solar cells, encapsulant sheets (2 Nos) and backsheet, the total laminated thickness can be anywhere between 5.0mm to 5.4mm.

Why should you choose a frameless solar module?

Easier for handling, movements, and installation: 35% lighter than the traditional 3.2 mm glass. The frameless modules with this glass have superior edge sealing leading to increased module life. Highly reliable Solar Glass.
