

Solar AC combiner box two in one out

Overview

How does a solar combiner box function?

A solar combiner box binds multiple strings of photovoltaic (PV) modules into one standard bus. It connects the strings to the PV inverter. According to Northern Arizona Wind & Sun, for solar combiner boxes between 12 and 48 volts, it's a must to use breakers in place of fuses.

Do you need a combiner box for a solar inverter?

"Solar combiner boxes are engineered to provide overcurrent and overvoltage protection to enhance inverter protection and reliability," he said. "If a project only has two or three strings, like a typical home, a combiner box isn't required. Rather, you'll attach the string directly to an inverter," Sherwood said.

What should you use instead of fuses in a solar combiner box?

According to Northern Arizona Wind & Sun, for solar combiner boxes between 12 and 48 volts, it's a must to use breakers in place of fuses. As the name suggests, you use the solar combiner box to bind multiple strings of photovoltaic (PV) modules into one standard bus. The fibers are subsequently attached to the PV inverter.

What is a PV AC combiner box?

The new PV AC Combiner boxes have been designed for PV systems with string inverters in trackers or fix tilt systems. The product portfolio is suitable for inverters from 60 kW up to 200 kW and support voltages of 400 V, 690 V or 800 V AC. The combiner boxes allow to collect from 2 up to 6 string inverters in one single cabinet.
