

# Solar glass assembly structure

## Overview

---

What is the assembly process of a solar panel?

The assembly process of a solar panel is concerned to best integrate each raw material adopting all the optimizations necessary to improve the quality of the final product. It can use dedicated equipment for each step of the pv module production with different levels of automation. Contact us to develop your project together.

What is a solar glass substrate?

Manufacturers of crystalline silicon solar modules apply glass substrates on the front side of the solar modules. This front glass will either be a patterned glass or a glass with anti-reflective coating (AR). As in all other glass manufacturing processes, solar glass substrates are subject to defects during production.

Why is patterned glass used in crystalline solar modules?

In the production of crystalline solar modules patterned glass substrates are used in lieu of bare glass. Patterned glass increases the amount of incoming sunlight. Common optical inspection systems for quality assurance and process control are mostly designed for unstructured glass.

What is the process of making solar panels?

Solar panels are made through the following process: Sand → Silicon → Wafer → Photovoltaic Cell → Solar Panel. This involves silicon wafer production, cell fabrication, and the assembly of panels into solar modules in a solar manufacturing plant.
