

Solar off-grid power generation system configuration

Overview

Does this guideline support off-grid solar installations?

This Guideline supports solar installations that are off-grid and include systems where all the energy is supplied from solar photovoltaic modules (or when a fuelled generator is used either as a back-up or daily).

How do I design an off-grid solar or battery system?

The most important part of designing any off-grid solar or battery system is calculating the daily energy requirement in kWh. For grid-connected sites, detailed load data can often be obtained directly from your electricity retailer or by using meters to measure the loads directly.

How to design an off-grid PV power system?

The design of an off-grid PV power system should meet the end-user's required energy demand and maximum power demands. However, there are times when other constraints need to be considered as they will affect the final system configuration and selected equipment. These include:.

Do off-grid solar panels need maintenance?

Your off-grid solar system will require occasional maintenance and care to keep things running smoothly. Here's what we recommend: Dust and debris can settle on the face of your solar panels, which will impact the output of the system if your panels get too dirty.
