# Solar power system in Antwerp Belgium

## Overview

---

Is Antwerp a good location for solar power?

Antwerp, Flanders, Belgium (latitude: 51.2192, longitude: 4.3917) is a suitable location for generating solar power through photovoltaic (PV) systems. The average energy production per day for each kilowatt of installed solar capacity varies across seasons: 5.35 kWh in summer, 2.33 kWh in autumn, 1.17 kWh in winter, and 4.56 kWh in spring.

How much solar energy does Antwerp use a day?

Average 2.33kWh/day in Autumn. Average 1.17kWh/day in Winter. Average 4.56kWh/day in Spring. To maximize your solar PV system's energy output in Antwerp, Belgium (Lat/Long 51.2192, 4.3917) throughout the year, you should tilt your panels at an angle of 43° South for fixed panel installations.

How many solar PV locations are there in Belgium?

So far, we have conducted calculations to evaluate the solar photovoltaic (PV) potential in 201 locations across Belgium. This analysis provides insights into each city/location's potential for harnessing solar energy through PV installations. Link: [Solar PV potential in Belgium by location](#).

How to optimize solar generation in Antwerp Belgium?

Assuming you can modify the tilt angle of your solar PV panels throughout the year, you can optimize your solar generation in Antwerp, Belgium as follows: In Summer, set the angle of your panels to 35° facing South. In Autumn, tilt panels to 54° facing South for maximum generation.
