

# **Solar power with grid backup in Spain**

## Overview

---

Why does Spain need a solar grid?

It wants a grid that can generate, store, and sustain energy without import gaps or guesswork. For Spain, which is already a leader in solar energy, the blackout was the push it needed to build a system without limits. Back in 2021, Spain had just over 35 GW of solar capacity. Now?

.

What is energy storage in Spain?

It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports hybrid projects, which combine storage with renewable energy, such as solar or wind farms.

How will Spain increase its energy storage capacity?

Spain has launched an ambitious €700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems.

Will solar panels power Spain around the clock?

Solar panels alone won't power the country around the clock. What Spain is not doing is racing to build the system behind the sunshine smart grids, storage, and energy does not vanish when the sun sets, so the new plan includes: You can see the change in where Spain puts its focus.

## Solar power with grid backup in Spain
