

Solar water pumping system in Mumbai India

Overview

What is the use of solar water pump in India?

In India, the solar water pump is mainly used for irrigation and drinking purpose. The solar water pump of capacity 5hp (horsepower) can deliver about 124,000 liters of water per day. In India, a total of 1, 20,000 solar PV water pumping systems have been installed in 2016.

What is the Indian solar water pump market?

The Indian solar water pump market is expected to grow significantly due to increasing application in the domestic and agriculture sector, increasing government support, and low maintenance. Solar water pumps are easy to install due to which it is becoming popular among the end-user.

What is a solar water pump?

A solar water pump is an application of photovoltaic technology which converts solar energy into electricity to run the pumping system thereby, replacing erratic grid supply and pollution-causing diesel-powered versions. The solar water pump is powered by solar modules that helps draw surface or ground water out for irrigation.

What types of solar water pumps are available?

TATA POWER SOLAR offers both DC and AC range of Solar Water Pumps in both Surface and Submersible categories. These pumps help reduce farmers' dependency on expensive fuels and their maintenance costs as opposed to conventional irrigation systems.
