Split solar circulating water pump

Overview

How does a solar water pumping system work?

The solar water pumping system uses solar energy to pump water. The system operates on power generated using solar PV (photovoltaic) system. The photovoltaic array converts the solar energy into electricity, which is used for running the motor pump set. The pumping system draws water from the open well, bore well, stream, pond, canal etc.

What are solar panels plus pumping solutions?

Solar Panels Plus provides a number of different pumping solutions for solar hot water and solar space heating systems. These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops.

How does a 2 hp solar water pump work?

This 2 HP solar water pump works on the solar power generated by solar panels. The radiation coming from the sun strikes the solar panel which is turned into solar energy to run the motor pump set through a solar pump controller. The solar pumping system draws water from open wells, bore wells, ponds, etc.
