

Thailand Tower Communication Green Base Station

Overview

Which GHz band does Thailand use?

In the 2.6 GHz band, Thailand has assigned IMT spectrum based on the TDD n41 band plan. Thailand's ASEAN neighbours Cambodia, Lao PDR and Malaysia, currently use the hybrid FDD/ TDD configuration (b7/b38) for 4G services in this band.

Which MHz band is suitable for small cell deployment in Thailand?

While around 3,200 MHz of mobile spectrum has been assigned in Thailand, the 26 GHz mmWave band – suitable for localised small cell deployment due to its propagation characteristics – accounts for most of this figure.

Which GHz band should Thailand use for 5G?

Recommendation: 3.5 GHz band– As detailed above, there are significant challenges for Thailand to make the 3.5 GHz band available for 5G services, especially in the amounts needed to address the shortfall in mid-band spectrum.

Is Thailand a leader in mobile spectrum in the ASEAN region?

In February 2020, Thailand's regulator, the National Broadcasting and Telecommunications Commission (NBTC), successfully auctioned 2 820 MHz of spectrum across the 700 MHz, 2.6 GHz and 26 GHz bands, making Thailand the leader in assigned mobile spectrum in the ASEAN region.
